

Cargo Bag

Instructions For Use

www.XSscuba.com

The Cargo Bag provides secure storage within your UFO. The bag securely clips into the forward portion of the UFO and closes with a zipper. This keeps your items secure even if the UFO were to flip over for any reason. It is a great place to store drinking water, tools, slates, cameras, or spare equipment.

Installation

If your UFO has a criss-cross bungee installed, lower the cordlock to loosen it up (Fig. 1). The Cargo bag will rest on top of it. If you prefer, it can also be removed by opening up one of the end caps and untying the simple retaining knot.

Position the Cargo Bag, rounded end forward, into the forward portion of the UFO. The two side clips on the Cargo Bag get clipped to the two forward plastic rings on the UFO.

The two rear clips on the UFO, get clipped to the adjacent side rings on the UFO (Fig. 2).
