

Handle Assemblies (pair)

Instructions For Use

www.XScuba.com

The Handle Assemblies add 4 peripheral handles to the UFO. It is an accessory that every instructor will want to have so that students can hold on to the UFO.

Installation

Take one of the Handle Assemblies and fold it in half to find the center point of the rope. Feed the center of the rope up through the center, upper D-ring, forming a loop (Fig.1).

Run the two ends of the rope through the loop that you created and pull snug (Fig. 2).

Tie the two ends to the adjacent upper D-rings (Fig. 3).

Alternate method: Feed the ends of the rope through the adjacent lower retaining hooks and tie a figure 8 knot in the line so that it cannot pull back through (Fig. 4).
