

# Neoprene Knife Wrap

*Instructions for Use*

Thank you for purchasing an XS Scuba Neoprene Knife Wrap. This versatile design can be used with many different knives and is a great alternative to traditional rubber straps.

- 1. Unfasten the sheath retaining strap.**
  - a. Lift the end of the strap from the hook and loop.
  - b. Open the cam buckle. Pull the strap through the buckle
  - c. Pull the strap through the center loop.

- 2. Secure the knife sheath to the knife wrap.**
  - a. Remove the knife from the sheath.
  - b. Insert the tip of the sheath into the neoprene pocket. Insert it deep enough so that the slots, where the upper strap would normally go, align with the center loop of the knife wrap.

- 3. Route strap through the sheath**
  - a. Feed the retaining strap from the top of the upper right slot on the sheath.
  - b. Next, route the strap through the center loop on the knife wrap.
  - e. Bring the strap back up through the upper left slot on the sheath.

#### 4. Secure the sheath retaining strap

- a. Thread the strap through the cam buckle until the sheath is flat against the wrap. Close the buckle.
- b. Secure the end of the strap with the hook and loop

**5**

#### 5. Proper routing of sheath retaining strap

**6**

#### 6. Fitting the knife wrap to your leg.

- a. Lift the two hook tabs and loosen both of the leg straps.
- b. Position the knife wrap on your leg, tighten the straps and secure the hook tabs.

Note: Two hook tabs are used for redundancy. Though challenging to grip with gloves they are kept low profile so they won't lift during surf or boat entries.

**7**

#### 7. Changing the leg strap length.

- a. If the leg straps are too long or too short, the strap length can be changed.
- b. Separate the hook and loop on the underside of the leg strap.
- c. Make the strap longer or shorter, as required.
- d. Using the hook and loop, fasten the end of the leg strap to the underside.
